

PCI DSS 1.2 Wireless Security Compliance Report

from 2009-09-17 16:19:59 to 2009-09-18 16:19:59

System Name: AirDefense
Domain: System
Generated: 2009-09-18 16:21:13
Version: 7.3.3-12
Time Zone: EDT - Eastern Daylight Time

This report provides a summary of your Wireless LAN Security compliance with reference to the Payment Card Industry (PCI) Security Standards Council Compliance requirements. PCI Data Security Standards (DSS) compliance is required of all merchants and service providers that store, process, or transmit cardholder data. PCI DSS offers a single approach to safeguarding sensitive data for all card brands. The PCI DSS requirements specified in this report are directly from the PCI DSS standard which can be located at <https://www.pcisecuritystandards.org>.

Requirement 1: Install and maintain a firewall configuration to protect cardholder data

- 1.1 Establish firewall configuration standards that include the following:

1.1.2 A current network diagram with all connections to cardholder data, including any wireless networks
- 1.2 Build a firewall configuration that restricts connections between untrusted networks and any system components in the cardholder data environment.

1.2.3 Install perimeter firewalls between any wireless networks and the cardholder data environment, and configure these firewalls to deny or control (if such traffic is necessary for business purposes) any traffic from the wireless environment into the cardholder data environment.

Requirement 2: Do not use vendor-supplied defaults for system passwords and other security parameters

- 2.1.1 For wireless environments connected to the cardholder data environment or transmitting cardholder data, change wireless vendor defaults, including but not limited to default wireless encryption keys, passwords, and SNMP community strings. Ensure wireless device security settings are enabled for strong encryption technology for authentication and transmission.

Device Configuration Compliance

Total APs Observed with Default Configuration

0

Requirement 4: Encrypt transmission of cardholder data across open, public networks

- 4.1 Use strong cryptography and security protocols such as SSL/TLS or IPSEC to safeguard sensitive cardholder data during transmission over open, public networks. Examples of open, public networks that are in scope of the PCI DSS are:

The Internet, Wireless technologies Global System for Mobile communications (GSM), and General Packet Radio Service (GPRS)

Authorized APs with Encryption Violations(Up to 50 Listed)

Count	Device	SSID	Channel	Start Time	Location	Group
5	 Symbol:27:e1:b0[a]	MXAP	36	9/17/09 5:13 PM	Atlanta, GA Office	1st Floor

Clear text wired leakage violations:

0

- 4.1.1 Ensure wireless networks transmitting cardholder data or connected to the cardholder data environment, use industry best practices (for example, IEEE 802.11i) to implement strong encryption for authentication and transmission.

For new wireless implementations, it is prohibited to implement WEP after March 31, 2009.

For current wireless implementations, it is prohibited to use WEP after June 30, 2010.

Authorized APs with Authentication Violations (Up to 50 Listed)

Count	Device	SSID	Channel	Start Time	Location	Group
1	 Belkin:c2:ff:c3[b,g]	ralphsnart	1	8/11/09 6:49 PM	Auburn, GA	Auburn

APs Observed Utilizing WEP

1

AP Authentication Methods

AP Encryption Methods

Requirement 9: Restrict physical access to cardholder data.

9.1.3 Restrict physical access to wireless access points, gateways, and handheld devices.

Requirement 10: Track and monitor all access to network resources and cardholder data.

AirDefense Enterprise tracks and stores 325 minute by minute statistics for all wireless activity on a minute by minute basis. This forensic data is available through a combination of storage on the appliance and archival mechanisms.

Requirement 11: Regularly test security systems and processes.

11.1 Test for the presence of wireless access points by using a wireless analyzer at least quarterly or deploying a wireless IDS/IPS to identify all wireless devices in use.
