Wired for Wireless

Cabling and Infrastructure for Wireless Networks

AGENDA

- 802.11ac Wave 1 and Wave 2, 802.11ad, 802.11ax
- NBase-T
- TIA Standards, BICSI Guidelines
- Healthcare and Hospitals
- Mounting APs
 - Performance
 - Aesthetics
 - Security

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

802.11ac Wave 2 MU-MIMO TCP Throughput at the WAP (Mb/s)

	<u>1SS Client</u>	<u>2SS Client</u>	<u>3SS Client</u>	<u>4SS Client</u>
• 3 SS VHT 80 MHz WAP	303 Mb/S	607	910	N/A
• 4 SS VHT 80 MHz WAP	303	607	910	1,213
• 3 SS VHT 160 MHz WAP	607	1,213	1,820	N/A
• 4 SS VHT 160 MHz WAP	607	1,213	1,820	2,426

802.11 ac Wave 2 TCP throughputs at the Ethernet connector. Courtesy of Peter Lane, Aruba Networks- Atmosphere 2015

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

- **802.11ad**

- An amendment to 802.11 standard, commonly referred to as Wi-Gig (Wi-Fi alliance certification)
- Greater than 1Gb/s TCP throughput
- 60 GHz operation – “tri-band” access points
- “Line-of-sight” in-room operation due to attenuation through walls and ceiling tiles

- **802.11ax**

- A new amendment to 802.11 standard, release in 2019??
- Greater than 1Gb/s TCP throughput (four times improvement in average throughput per station) through advancements in coding and modulation
- Operation between 1 GHz to 6 GHz

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

NBase-T

- Consortium of companies created to carry out the stated mission “to promote the development of 2.5 and 5 Gigabit Ethernet technology for enterprise infrastructure”.
- Enable the transmission of data rates at 2.5 and 5 Gb/s over existing, installed Category 5e and 6 cabling
- NBase-T allows users to extend the lifespan of the installed cable, by refreshing the electronics at each end of the cable.
- The IEEE P802.3bz 2.5/5Gig taskforce is developing an amendment to standardize 2.5/5 Gig products.

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

Telecommunications Systems Bulletin TSB-162A “Telecommunications Cabling Guidelines for Wireless Access Points”

- Category 6A balanced twisted-pair cabling or OM3 optical fiber cabling is recommended for support of WLANs (especially NEW networks)
- Information on using link aggregation (the use of multiple equipment outlets (EOs) for a single access point) to support greater than 1 Gb/s Wi-Fi transmission rates and/or increased power requirements was added
- Maximum link length calculations were modified to account for different equipment cord types
- Information on wireless access point mounting options was added
- Information on physical security for wireless access points was added, including use of a locking enclosure

Cabling and Infrastructure for Wireless Networks

From Telecommunications Systems Bulletin TSB-162A

“Telecommunications Cabling Guidelines for
Wireless Access Points”

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

TIA 568-C.1 Commercial Buildings Telecommunications Cabling Standard

- Horizontal cabling is terminated in a telecommunications outlet
- Bend radius is 4X cable diameter for horizontal cables, 1 X cord diameter for patch cord
- National Electric Code (NEC)
 - Paragraph 300.22- Wiring in ducts, Plenums and Other Air-Handling Spaces
 - Paragraph 300.23 Panels Designed to Allow Access

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

Stow excess horizontal cable and biscuit jack in ceiling enclosure

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

- **Hospital Wireless Networks References**

- TIA ANSI/TIA-1179 *Healthcare Infrastructure Standard* - ..” infection control requirements could have a serious impact on times and conditions for cabling installs, moves, adds, and changes as well as restrictions on removing ceiling tiles, wall penetrations and access to unoccupied spaces”
- BICSI-004- *Information Technology Systems Design and Implementation Best Practices for Healthcare Institutions and Facilities*
- BICSI *Guide to Medical Grade Wireless Utility*- Passive antennas can be mounted above or below ceiling. Active equipment (access points) should be in cabinet flush with or below ceiling or wall mounted.

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

- **WIRELESS ACCESS POINT MOUNTING**
 - ✓ Performance and Coverage
 - ✓ Aesthetics
 - ✓ Physical Security
 - ✓ Maintenance and Access
 - ✓ Future readiness
 - ✓ Code Compliance
 - ✓ Installation time and cost

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

- **Suspended Ceiling and “Cloud” Ceiling Mounting**
 - Attached to grid, hanging from ceiling
 - Above suspended ceiling (both Cisco and Aruba networks advise against)
 - In a flush ceiling enclosure or mount

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

- **Suspended Ceiling Mounting**

- Performance and Coverage
- Aesthetics
- Physical Security
- Maintenance and Access
- Future readiness
- Code Compliance
- Installation time and cost

Above ceiling hanger

Suspended ceiling recess AP mount tile bridge

Suspended ceiling locking enclosure

Suspended ceiling recess AP mount

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

- **Hard Ceiling and Wall Mounting**
 - Surface Mount on hard wall or ceiling
 - Recess mount on hard wall or ceiling
 - Right angle brackets for wall

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

- Surface Mount on Hard Ceiling and Wall

Surface mount box

Surface mount non-metallic enclosure

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

- Recess Mount on Hard Ceiling and Wall

Recess mount trim and cover

Recess mount with backbox

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

- Right Angle Brackets on Wall

Wired for Wireless

Cabling and Infrastructure for Wireless Networks

- Open Ceilings

Right angle wall bracket for AP with black vanity cover

Hanging conduit or pendant AP mount
