Cedric Terrier

CWNT

What got you interested in wireless?

I'm a network engineer and amateur sailor that has used radio for years. And like the internet did, I believe that wireless will change our way of life by interconnecting, devices, transports, objects, etc.

How did you find CWNP?

I found CWNP in France. It was 2008 and I was looking for a deeper knowledge of wifi technologies. I found a book at the library, the CWNA, and so on.

What do you like about CWNP compared to other programmes?

The vendor-neutral aspect, the community way, and the quality of the courses.

What are your plans for the future and why? We understand you'd like to become an ALP. Why is this important to you?

Become a CWNE, develop the KinEссор expertise center. I'm the director of the wireless domain. We believe in the development of the wireless technologies, and that our clients need to have a better understanding of wireless technologies in order to make good choices or have the right level of support.

We want our team to become the reference in the Quebec province, and in Canada, and maybe even in French-speaking, foreign countries, like Africa, where these technologies have a great future.

BIO

Cédric Terrier has been a network engineer for 18 years. He began working on WIFI in 2005. At the beginning of his career, Cedric was a trainer for the Chamber of commerce of the reunion island during 3 years. As a trainer, he has developed online courses and learning software to teach network and electronic. Since then, even though he chose to become a IT consultant, he always like to share his knowledge and interest on wireless technologies.

After the installation of his first wireless LAN router in 2000 at his home in Paris, he became the team leader of a major wlan deployment in France at the CHU of Bordeaux from 2007 to 2011. This critical project has given him the chance to work on all the aspects of WLAN: survey, security, large-scale VoWifi & devices management, and also troubleshooting.

Cedric has worked on various environment, healthcare, warehouse, education, rural networks, and franchise, with various vendors equipment.

Cedric is now the manager of the wireless expertise center at KinEссор in Montreal, he can be reached via email at cterrier@kinessor.com.
